

MoneyFinder - Find Hidden Revenue

Two
cost-effective options
in one software
solution

Your claims database contains hidden revenue. Discover an easy way to verify health plan eligibility without checking each patient one at a time.

- Obtain revenue by submitting bad debt-self pays to the patients' state of residence Medicaid before sending to collections
- Verify eligibility during pre-registration
- Quickly identify patients who have third party coverage
- Identify patients classified as Medicare who have Medicaid dual cross-over coverage
- Find Medicaid or Medicare inpatient days to count towards your Medicare DSH calculation
- Update your patients eligibility status on a monthly basis for those patients who have retroactive coverage (Medicaid and Commercial)
- Eliminate time consuming, ineffective eligibility efforts like payer websites and stand-alone point-of-service devices
- Maintain a history of eligibility requests and responses

How MoneyFinder Works:

Two cost-effective options available in one software solution.

MoneyFinder, real-time and small batch software, provides quick, real-time eligibility verification. Inquiries are entered into query screens designed specifically with search options unique to each payer. The response may be viewed in real-time, while posting to the patient file, providing historical views of the requests and responses at anytime. MoneyFinder is available for single or multi-user workstations. A network version is also available where the database resides on a central server for access by one or more workstations.

MoneyFinder Plus, large batch software with custom input and output options, generates (from your host system) and transmits large eligibility batch files in a format defined by your organization, to a multitude of payers. MoneyFinder Plus returns the responses in a CSV (Comma Separated Value) or a Microsoft Excel spreadsheet allowing you to upload the data into your host system at your convenience. MoneyFinder Plus retains a history of your inquiry and payer response allowing for future viewing.

MoneyFinder:

- Stores historical requests and responses in a centralized database
- Autofills search fields from previous patient visits
- Maintains multiple batch files – allowing you to run a series of patients at the beginning of each month or anytime, without having to rebuild the batch.
- Stores Provider NPI
- Returns inquiry and response files for comparison of data differences
- Eliminates memorizing unique login and passwords for multiple websites
- Is HIPAA compliant and secure

MoneyFinder increases revenue collection, improves productivity and provides an immediate financial reward. Join the growing number of hospitals and clinics that have enhanced their revenue cycle with MoneyFinder. Contact Provider Advantage at (800) 203-5465 for a demonstration or more information.

Easier way to verify
health plan eligibility
without checking each
patient one at a time...
it's your
Provider Advantage.
