

# RemitLink

Seamless, integrated solution that posts non-standard remittance advices

## Electronic Remittance Advice (ERA) Management

Remittance advice posting has never been easy, and the manual process is even more tedious. You know the procedure: receive different formats from various payers, decipher the payer specific adjustment codes, post the codes to the patient files, adjust amounts owed. In the end, the operational difficulties resulting from an inefficient cash posting process can cost you thousands of dollars and waste precious time.

Remittance posting doesn't have to be this hard.

Provider Advantage has developed software that translates ANSI 835 or proprietary ERA data to a format that can be seamlessly integrated into the hospital host system. With this module, *remittance posting becomes fully electronic and automated*, substantially reducing labor costs and posting errors while speeding the posting process.

### What RemitLink Does -

- Translates diverse ERA formats: Automatically translates and prepares disparate electronic remittance advice formats, including the ANSI 835, for on-line processing by RemitLink or batch processing by the host system
- Calculates and compares adjustments: Determines the contractual adjustment based on user-defined criteria, with consideration of applicable deductibles and co-insurance. Where required, bypasses the posting of payments or adjustments using custom business rules
- Automates posting: For on-line systems, enters payment data in real-time using a unique automated posting capability
- Posts reason codes: For on-line systems, posts the rejection / denial codes to the patient's account
- Creates comprehensive reports: Provides a summary and detail report package, with user-defined reports available upon request

### What You Gain -

- Accelerated posting of electronic remittance advices, enabling faster collection of patient co-payments
- Increased ability to track payments and contractual allowances, promoting more accurate financial management
- Improved accuracy and enhanced data integrity in remittance posting
- Efficient remittance processing with automated payment posting that eliminates redundant data entry
- Improved utilization of staff, as using RemitLink allows for the reassignment of FTEs to activities that cannot be automated
- Streamlined process, using one system to access multiple sources: Medicare, Medicaid, commercial payers, clearinghouses, and bank lock-boxes

Eliminate manual posting of non-standard ERAs and find more time for patient care... it's your Provider Advantage.
